

Beaumont Weight Control Centers

Medical weight loss, bariatric surgery and more

When you refer a patient to one of Beaumont's weight control or bariatric surgery programs, our multidisciplinary team will alert you when they get started and send regular communication outlining their progress. We will also forward all lab and test results to your office. We encourage patients to continue their regular appointments and follow-ups with you. Here is some helpful information on referring your patients:

- All weight control and bariatric patients should attend a free in-person seminar or watch the online version before scheduling their first appointment. Information can be accessed at beaumont.org/weight.
- Nutritional Health and Healthy Kids program patients should call one of our four weight control center locations listed below for more information.
- A referral is not required to access Beaumont's Weight Control, Bariatric or Nutritional Health programs (with the exception of Blue Care Network patients). Pediatric patients being referred to our Healthy Kids program require a referral.
- If you are an Epic user, there is an electronic referral available.

Who is a good candidate?

- **Beaumont Weight Control program:** BMI greater than 30, or greater than 25 with comorbidities.
- **Bariatric Surgery program:** BMI greater than 40, or greater than 35 with Type 2 diabetes or other comorbidities (Note: All HAP patients are required to have surgery at a Henry Ford facility).
- **Healthy Kids program:** Patients 3 to 18 years old with a BMI at or above the 85th percentile.
- **Nutritional Health program:** Adults interested in optimizing health through nutrition and lifestyle change. No BMI requirement. Functional micronutrient testing offered.
