The purpose of the program is to provide patients with complex chronic pain conditions a more effective, evidence-based treatment option. These patients are often long-term patients of pain clinics with an emphasis on procedures and opioid pain medication management. Yet, these patients often do not achieve successful outcomes long term, tend to rotate through the various medical services and specialties repeatedly searching for a solution to their pain. These patients also tend to be ones who are high utilizers of medical care and emergency services.

The Pain Rehabilitation Program (PRP) is a 5-day outpatient program focused on functional restoration of chronic pain patients provided by a multidisciplinary team. All members of the team are housed in the same physical space to provide this program. Patients will participate in the program Monday – Friday from 8:30am to 12:30pm on a specific week of the month. Each day consists of a combination of physical therapy, occupational therapy, cognitive behavioral skills therapy, yoga and/or mindfulness education, etc. All modalities will be focused on helping patients learn the skills to self-manage their pain condition long term.

We accept all insurance plans that are contracted with Beaumont. A self-pay option and Beaumont financial assistance may be available in some cases. If you’re interested in referring a patient to our program, there is now an order available in EPIC by selecting Referral to Pain Management and then selecting the option for the Consult for 5-Day PRP, Troy. Alternatively, you can still complete a PRP Referral Form and fax to (248) 267-5703 or send Pt name, MRN to Dr. Stevenson through EPIC Staff message or Beaumont secure email.
