The purpose of the program is to provide patients with complex chronic pain conditions a more effective, evidence-based treatment option. These patients are often long-term patients of pain clinics with an emphasis on procedures and opioid pain medication management. Yet, these patients often do not achieve successful outcomes long term, tend to rotate through the various medical services and specialties repeatedly searching for a solution to their pain. These patients also tend to be ones who are high utilizers of medical care and emergency services.

The Pain Rehabilitation Program (PRP) is a 5-day outpatient program focused on functional restoration of chronic pain patients provided by a multidisciplinary team. All members of the team are housed in the same physical space to provide this program. The program is available each month for one week. Each day will consist of some combination of physical therapy, occupational therapy, group skills therapy, yoga and/or mindfulness education, etc. All modalities will be focused on helping patients learn the skills to self-manage their pain condition long term.

We accept all insurance plans that are contracted with Beaumont. A self-pay option will also be available. If you’re interested in referring a patient to our program, please complete the PRP Referral Form and fax to (248) 267-5703 or send an Email or EPIC Staff message to Alina Stevenson using the contact information below. Epic referral option coming soon!
